

Are your patients hearing (and living) the best they can?

Hearing is a critical part of your patients' overall health. Did you know that people with untreated hearing loss are twice as likely to suffer from memory loss and four times as likely to have heart and cardiovascular disease?

Hearing loss is common in adults with diabetes. Patients often struggle with depression and anxiety because of untreated hearing problems.

Therefore, you play an important role in the early detection of hearing loss. It starts with a simple hearing check and patients need to hear from you, their doctor, that they need to seek help.

If you notice a patient struggling with their hearing or if they bring up a concern about their hearing, ask them to complete the Hearing Assessment on the back of this Referral Form.

If they answer YES to 3 or more questions, refer them to Avalon for a thorough Hearing Test and Consultation.

Please schedule a complimentary Hearing Test & Consultation for:

Patient Name _____
(please print)

Patient Phone # _____

Referring Physician _____
(please print)

Date _____

My patient would also benefit from:

_____ **Hearing Aid Evaluation**

_____ **Tinnitus Assessment**

_____ **Educational Seminar**

Give this Referral Form to your patient and tell them to make an appointment with Avalon Hearing. Or fax this request to **(916) 483-3514**.

A follow-up report with findings and recommendations for treatment will be delivered to you. Together, we can ensure your patients are hearing (and living) the best they can!
